

Payroll and Human Resource Management System Use Case Scenarios

A use case scenario is a written sequence of steps of events occurring during the execution of a use case and the interactions of external actors.

Actors in the Payroll and Human Resources Management System:

- **User:** Any user with an active account in the system regardless of their authority, gaining access to notification, announcement pages and can be enrolled in trainings.
- **Employee:** The primary user of the system having the “EMPLOYEE” authority who marks their attendance, submit requests, view and download their payslips.
- **Manager:** User with “MANAGER” authority when assigned manager for a user or more, they view team attendance, view and review their requests and request bonuses or raise for them.
- **HR:** User with any HR related authority who views employees and their information as well as post announcements for all users.
- **Leave Specialist:** User with authority “HR_ATTENDANCE_LEAVE” who views all users’ attendance as well as view and review employees’ leave requests and permissions
- **HR Admin:** User with “HR_ADMIN_CREATE_EMP” authority who creates user accounts, “HR_ADMIN_EDIT_EMP” authority who edits user information, “HR_ADMIN_APPROVE_COMPENSATION” authority who views and reviews compensation requests, “HR_ADMIN_DEACTIVATE_EMP” authority who can activate, deactivate or delete user accounts, “HR_ADMIN_SYSTEM_SETTINGS” authority who configures system rules, “HR_ADMIN_ORG_CONFIG” authority who manages departments, roles and performance review cycles or “HR_ADMIN_BENEFITS” authority manages benefits and plans as well as user dependents.
- **Payroll Specialist:** User with “HR_PAYROLL_ADJUST_SALARY” authority who adjusts employee salary, “HR_PAYROLL_RUN” authority who runs

regular and off-cycle payrolls and generates payslips or “HR_PAYROLL_REVIEW” authority who reviews regular payroll periods.

- **Applicant:** User who don't need to have an account in the system, they access application forms for job opening where they apply.
- **Recruitment Specialist:** User with “HR_RECRUIT_CREATE_JOB” who create update or close job openings, “HR_RECRUIT_FILTER_INTERVIEW” authority who filter applicants using the resume filter or “HR_RECRUIT_HIRE” authority who sends offers to applicants.
- **Training HR:** User with “HR_TRAINING” who manages trainings, courses, resources and mark users courses as complete.
- **Supervisor:** Users assigned as a supervisor for a certain training who can manage resources and mark users courses as complete.
- **Clerk:** User who is assigned a manager for a specific user or has any payroll specialist authority.

Use Case Scenarios:

Login:

Primary Actor: User

Stakeholders: Users

Preconditions: The user has to have an account that is active.

Minimal Guarantee: Prevent login with wrong credentials.

Success Guarantee: A JWT token with the user's authorities is issues and the user is routed to the dashboard.

Main Success Scenario:

1. User opens the application and is presented with the login form.
2. User enters their email and password.
3. Credentials are validated against the active users in the database.
4. A Token with user's email and authorities is issued and user is directed to their dashboard.

View Announcements:

Primary Actor: User

Stakeholders: Users

Preconditions: The user has to have an account that is active.

Minimal Guarantee: Empty state message displayed if no announcements exist.

Success Guarantee: All announcements viewable by the user are displayed.

Main Success Scenario:

1. Authenticated user selects 'Announcements' from the navigation menu.
2. System fetches announcements from the database, ordered by creation date descending.
3. System returns announcements relevant to the user's department and manager.

View Notifications:

Primary Actor: User

Stakeholders: Users

Preconditions: The user has to have an account that is active.

Minimal Guarantee: Empty state message displayed if no notifications exist.

Success Guarantee: All notifications viewable by the user are displayed.

Main Success Scenario:

1. Authenticated user clicks on the notification icon.
2. System fetches notifications from the database, ordered by sent date descending.
3. System returns notifications for the user and marks them as seen.

Employee Use Case Scenarios:**Mark In and Out with Face Recognition:**

Primary Actor: Employee

Stakeholders: Employee, Manager, Leave Specialist HR

Preconditions: The user has to have registered face data in the system.

Minimal Guarantee: Attendance won't be recorded for anyone without registered face data.

Success Guarantee: An attendance record is created with precise check-in/check-out timestamps for the employee.

Main Success Scenario:

1. Employee approaches the biometric device.
2. A facial image is captured and submitted to the recognition service.
3. The image is matched against registered face data.
4. The employee is identified and their active shift for the current date is retrieved.
5. If no check-in exists: a check in record is created with the current timestamp.
6. If a check-in exists and no check-out: a check out record is created and worked hours are computed.
7. Lateness and early-departure rules are evaluated against the shift schedule.

Extensions:

1. If the day isn't working day, is a holiday or overlaps with leave request or permission, prevent mark in.

Mark In and Out with Geo Location:

Primary Actor: Employee

Stakeholders: Employee, Manager, Leave Specialist HR

Preconditions: The user has to have the EMPLOYEE authority, an approved remote work request for that date and allow location access for the website.

Minimal Guarantee: Attendance and location will be logged and manager will be notified in case the employee exits the work zone.

Success Guarantee: An attendance record is created with precise check-in/check-out timestamps for the employee as well as a log for the location and time for each ping.

Main Success Scenario:

1. Employee accesses the 'My Attendance' page and if that day is approved for remote work, they are prompted to check in/out.
2. Employee grants location permission; the device submits GPS coordinates.
3. The coordinates are validated to be in a 100-meter radius around the work location in the remote work request.
4. A Session record is created with the check-in timestamp and coordinates.
5. Periodic location pings are requested from the employee throughout the session.
6. Employee selects Check Out; the session is closed and worked hours are computed.

Extensions:

1. If the day isn't working day, is a holiday or overlaps with leave request or permission, prevent mark in.
2. If Check in attempt is outside the work zone, prevent the check in.
3. If employee stays outside the work zone for an hour, send a notification to their manager for potential suspicious activity.
4. If check out attempt is outside the work zone, allow check out and send a notification to their manager for potential suspicious activity.

Submit Attendance Complaint:

Primary Actor: Employee

Stakeholders: Employee and Manager

Preconditions: The user has to have an account that is active and the EMPLOYEE authority.

Success Guarantee: The complaint is submitted and routed to the employee's manager for review.

Main Success Scenario:

1. Employee accesses the 'My Attendance' page, goes to the complaints tab and clicks the '+' button.
2. Employee submits their complaint.
3. A Complaint record is created with PENDING status.
4. Their Manager receives a notification about the complaint.

Submit Leave Request:

Primary Actor: Employee

Stakeholders: Employee, Manager, Leave Specialist HR

Preconditions: The user has to have the EMPLOYEE authority with full-time employment type, the employee has sufficient leave balance for the requested type and leave rules are configured by HR Admin.

Minimal Guarantee: The request is rejected if balance is insufficient.

Success Guarantee: The leave request is saved with PENDING_MANAGER_APPROVAL status and the manager is notified.

Main Success Scenario:

1. Employee accesses the 'My Requests' page and click on '+' in the leave requests tab.
2. Employee selects leave type, start date, end date, and adds a note.
3. Employee uploads documents, which is required if request is sick, maternity, paternity or hajj leave.
4. The employee's available balance and eligibility for the selected leave type is checked.
5. The request is validated against leave rules (minimum notice period, max consecutive days).
6. The request is saved with PENDING_MANAGER_APPROVAL status.
7. The manager is notified for the request.

Extensions:

1. If leave request is full day and a remote work or permission, or another full or half day leave request exists for the same day, block submission.
2. If leave request is half day morning and a late arrival permission, full day or another half day morning request exists for the same day, block submission.
3. If leave request is half day afternoon and an early leave or overtime permission, full day or another half day afternoon request exists for the same day, block submission.
4. If leave request is half day afternoon or half day morning and requested days are more than 1 block submission.

5. If leave request overlaps with holiday or weekend block submission.
6. If balance is insufficient or employee not eligible (e.g. female employee requesting paternity leave) block submission.

Submit Permission:

Primary Actor: Employee

Stakeholders: Employee, Manager, Leave Specialist HR

Preconditions: The user has to have the EMPLOYEE authority with full-time employment type and leave rules are configured by HR Admin.

Success Guarantee: The permission is saved with PENDING_MANAGER_APPROVAL status and the manager is notified.

Main Success Scenario:

1. Employee accesses the 'My Requests' page and click on '+' in the permissions tab.
2. Employee selects date, and duration (HH:MM) and enters any comment.
3. The duration is validated against the configured maximum permission duration, and minimum notice period.
4. The permission is saved with PENDING_MANAGER_APPROVAL status.
5. The manager is notified for the permission.

Extensions:

1. If permission is the same day as a full day leave request, holiday or weekend block submission.
2. If early leave permission falls on the same day as a half day afternoon leave, overtime or another early leave permission block submission.
3. If overtime permission falls on the same day as a half day afternoon leave, early leave or another overtime permission block submission.
4. If late arrival falls on the same day as a half day morning leave request block submission.

Submit Remote Work Request:

Primary Actor: Employee

Stakeholders: Employee, Manager

Preconditions: The user has to have the EMPLOYEE authority and leave rules are configured by HR Admin.

Success Guarantee: The remote work request is saved with PENDING_MANAGER_APPROVAL status and the manager is notified.

Main Success Scenario:

1. Employee accesses the 'My Requests' page and click on '+' in the remote work tab.
2. Employee selects start date, end date, work location and enters work location label and any comment.
3. The duration is validated against the configured minimum notice period.
4. The request is saved with PENDING_MANAGER_APPROVAL status.
5. The manager is notified for the request.

Extensions:

1. If remote with full day leave requests, holidays or weekends block submission.

View Leave Balance:

Primary Actor: Employee

Stakeholders: Employee

Preconditions: The user has to have the EMPLOYEE authority and leave rules are configured by HR Admin.

Success Guarantee: Leave balance is displayed

Main Success Scenario:

1. Employee navigates to their balance from their profile page.
2. Leave balance is calculated based on approved leave requests according to the configured leave rules.
3. Leave balance break down is displayed: entitlements, used and remaining.

View Requests History:

Primary Actor: Employee

Stakeholders: Employee

Preconditions: The employee has to have an account that is active and have the EMPLOYEE authority.

Minimal Guarantee: Empty state message displayed if no requests exist.

Success Guarantee: All requests made by the employee are displayed.

Main Success Scenario:

1. Employee navigates to their request history from their profile page or each request tab in the 'My Requests' page.
2. All requests (leave, permission, remote work) are displayed according to most recently requested.
3. Employee clicks on a request to view full details of a certain request.

View and Download Payslip:

Primary Actor: Employee and Clerk

Stakeholders: Employee and Clerk

Preconditions: The employee has to have an account that is active and have the EMPLOYEE authority. The Clerk has to be the employee's manager or have any of the HR_PAYROLL_RUN, HR_PAYROLL_REVIEW and HR_PAYROLL_ADJUST_SALARY authorities.

Minimal Guarantee: Empty state message displayed if no payslips exist.

Success Guarantee: All payslips for the employee are displayed.

Main Success Scenario:

1. Employee navigates to 'My Payslips' page or clerk navigates to payslips tab in an employee's profile.
2. All payslip cycles for the employee with status PAYSLIPS_GENERATED is displayed.
3. Employee or clerk click on view button for a specific payslip.
4. Payroll details is retrieved and displayed in HTML format.

5. Employee or clerk can click download which downloads the payslip as PDF.
Extensions:

1. If Manager doesn't manage that specific employee, access is prevented.

Manager Use Case Scenarios:

View Team Member Information:

Primary Actor: Manager

Stakeholders: Manager and Employee

Preconditions: The manager has to have an account that is active and have the MANAGER authority.

Minimal Guarantee: Empty state message displayed if no managed employees exist.

Success Guarantee: Employee profile details will be displayed.

Main Success Scenario:

1. Manager navigates to 'Team Members' page.
2. A list of managed employees is displayed.
3. Manager select an employee from the list.
4. Manager is taken to the employee's profile where the employee's details are displayed.

Extensions:

1. If Manager doesn't manage that specific employee, access is prevented.

Manually Mark Attendance:

Primary Actor: Manager

Stakeholders: Manager and Employee

Preconditions: The manager has to have an account that is active and have the MANAGER authority.

Minimal Guarantee: Manager can access the manual mark form.

Success Guarantee: Attendance will be marked for the selected employees according to the filled-out information.

Main Success Scenario:

1. Manager navigates to 'Team Attendance' page and click the 'manually mark' button.
2. Manager selects the employees and the target date and enters check-in time, check-out time, and a reason for the manual entry.
3. The date is validated as not belonging to a calculated payroll period.
4. The attendance record is created or updated if it already exists.
5. Any overlapping leave request is refunded or split.
6. Employees are notified of the action and if any leave has been refunded or split.

Extensions:

1. If Manager doesn't manage the employees, marking is prevented.
2. If the selected dates overlap with a payroll period that has already been calculated marking is prevented.

Review Attendance Complaints:

Primary Actor: Manager

Stakeholders: Manager and Employee

Preconditions: The manager has to have an account that is active and have the MANAGER authority.

Minimal Guarantee: Empty state message displayed if no complaints exist.

Success Guarantee: The manager's decision will be recorded and the complaint's status will be updated.

Main Success Scenario:

1. Manager navigates to 'Team Attendance' page and goes to the 'Complaints' tab.
2. A list of complaints is displayed.
3. Manager can mark the complaint as resolved or rejected.
4. The complaint's status will be updated to RESOLVED or REJECTED accordingly and the employee is notified of the status.

Extensions:

1. If Manager doesn't manage the employee which the complaint belongs to, action is prevented.

Review Employee Leave Requests:

Primary Actor: Manager

Stakeholders: Manager, Employee and Leave Specialist

Preconditions: The manager has to have an account that is active and have the MANAGER authority.

Minimal Guarantee: Empty state message displayed if no leave requests exist.

Success Guarantee: The manager's decision will be recorded and the request's status will be updated.

Main Success Scenario:

1. Manager navigates to 'Leave Requests' Tab in the 'Team Requests' page.
2. A list of leave requests is displayed.
3. Manager can approve or reject leave requests.
4. In case of approval the request's status will be updated to PENDING_HR_APPROVAL, the employee will be notified of the action and HR Leave Specialists will be notified to review the request, and in case of rejection the request status will be updated to REJECTED_BY_MANAGER and the employee will be notified of the rejection.

Extensions:

1. If Manager doesn't manage the employee which the request belongs to, action is prevented.

Review Employee Permissions:

Primary Actor: Manager

Stakeholders: Manager, Employee and Leave Specialist

Preconditions: The manager has to have an account that is active and have the MANAGER authority.

Minimal Guarantee: Empty state message displayed if no permissions exist.

Success Guarantee: The manager's decision will be recorded and the request's status will be updated.

Main Success Scenario:

1. Manager navigates to 'Leave Requests' Tab in the 'Team Requests' page.
2. A list of Permissions is displayed.
3. Manager can approve or reject permissions.
4. In case of approval the request's status will be updated to PENDING_HR_APPROVAL, the employee will be notified of the action and HR Leave Specialists will be notified to review the request, and in case of rejection the request status will be updated to REJECTED_BY_MANAGER and the employee will be notified of the rejection.

Extensions:

1. If Manager doesn't manage the employee which the request belongs to, action is prevented.

Review Employee Remote Work Requests:

Primary Actor: Manager

Stakeholders: Manager, Employee

Preconditions: The manager has to have an account that is active and have the MANAGER authority.

Minimal Guarantee: Empty state message displayed if no requests exist.

Success Guarantee: The manager's decision will be recorded and the request's status will be updated.

Main Success Scenario:

1. Manager navigates to 'Leave Requests' Tab in the 'Team Requests' page.
2. A list of remote work requests is displayed.
3. Manager can approve or reject remote work requests.
4. In case of approval the request's status will be updated to APPROVED, and in case of rejection the request status will be updated to REJECTED_BY_MANAGER and the employee will be notified of the action.

Extensions:

1. If Manager doesn't manage the employee which the request belongs to, action is prevented.

View Team Members' Attendance:

Primary Actor: Manager

Stakeholders: Manager and Employee

Preconditions: The manager has to have an account that is active and have the MANAGER authority.

Minimal Guarantee: Empty state message displayed if no Attendance exist.

Success Guarantee: Manager can view team members' attendance.

Main Success Scenario:

1. Manager navigates to 'Team Attendance' page.
2. A list of Attendance summaries for the managed employees is displayed.
3. Manager select an attendance record from the list.
4. Attendance record details are displayed.

Submit Performance Review:

Primary Actor: Manager

Stakeholders: Manager, Employee and HR Admin

Preconditions: The manager has to have an account that is active and have the MANAGER authority.

Minimal Guarantee: Manager can access the review submission form.

Success Guarantee: The manager's decision will be recorded and the request's status will be updated.

Main Success Scenario:

1. Manager navigates to the profile of a managed employee and click on 'add review' in their reviews section.
2. Manager selects a review cycle from a list of unreviewed open cycles.
3. Review cycle's metrics' details are displayed.
4. Manager fills out the ratings and comment and submits the review.

Extensions:

1. If Manager doesn't manage the employee which the review is submitted for, action is prevented.

2. If the Review cycle is closed, prevent submission.

Request Compensation for Employee:

Primary Actor: Manager

Stakeholders: Manager, Employee and HR Admin

Preconditions: The manager has to have an account that is active and have the MANAGER authority.

Minimal Guarantee: Manager can access the compensation form.

Success Guarantee: Compensation request for an employee is submitted.

Main Success Scenario:

1. Manager navigates to 'Compensation' page and clicks '+' button.
2. Manager selects the employee, and compensation type (bonus, raise), amount, reason, and effective from date, Manager can also upload any supporting documents.
3. HR Admin with the appropriate authority is notified of the new pending request.

Extensions:

1. If Manager doesn't manage the employee which the request is submitted for, action is prevented.

Leave Specialist Use Case Scenarios:

Approve or Reject Leave Requests:

Primary Actor: Leave Specialist

Stakeholders: Manager, Employee and Leave Specialist

Preconditions: The Leave Specialist has to have an account that is active and have the HR_ATTENDANCE_LEAVE authority.

Minimal Guarantee: Empty state message displayed if no requests exist.

Success Guarantee: The leave specialist's decision will be recorded and the request's status will be updated.

Main Success Scenario:

1. Leave specialist navigates to 'Requests' page.
2. A list of requests leave is displayed.

3. Leave specialist can approve or reject leave requests.
4. In case of approval the request's status will be updated to APPROVED and in case of rejections status will be updated to REJECTED_BY_HR and the employee and manager will be notified of the final decision.

Extensions:

1. In case of approval the employee's leave balance will be revalidated and any pending leave requests that exceed available balance will be automatically rejected.

Approve or Reject Permissions:

Primary Actor: Leave Specialist

Stakeholders: Manager, Employee and Leave Specialist

Preconditions: The Leave Specialist has to have an account that is active and have the HR_ATTENDANCE_LEAVE authority.

Minimal Guarantee: Empty state message displayed if no requests exist.

Success Guarantee: The leave specialist's decision will be recorded and the request's status will be updated.

Main Success Scenario:

1. Leave specialist navigates to 'Requests' page.
2. A list of Permissions is displayed.
3. Leave specialist can approve or reject a request.
4. In case of approval the request's status will be updated to APPROVED and in case of rejections status will be updated to REJECTED_BY_HR and the employee and manager will be notified of the final decision.

View Organization's Attendance:

Primary Actor: Leave Specialist

Stakeholders: Leave Specialist and Employees

Preconditions: The Leave Specialist has to have an account that is active and have the HR_ATTENDANCE_LEAVE authority.

Minimal Guarantee: Empty state message displayed if no Attendance exist.

Success Guarantee: Leave Specialist can view the organization's attendance.

Main Success Scenario:

1. Leave Specialist navigates to 'Attendance' page.
2. A list of Attendance summaries for all employees is displayed.
3. Leave Specialist select an attendance record from the list.
4. Attendance record details are displayed.

HR Admin Use Case Scenarios:

Create User Account:

Primary Actor: HR Admin

Stakeholders: User

Preconditions: The HR Admin has to have an account that is active and have the HR_ADMIN_CREATE_EMP authority.

Minimal Guarantee: HR Admin can access the employee creation form.

Success Guarantee: The user's account will be successfully created.

Main Success Scenario:

1. HR Admin navigates to the 'Employees' page and clicks the 'add' button.
2. HR Admin enters personal and job details, roles, salary, documents and account status upon creation.
3. Uniqueness of the national ID and emails are validated.
4. The user account is created.

Extensions:

1. If salary is less than configured minimum wage, prevent creation.
2. If company email, personal email or national ID already exists, prevent creation.

Activate, Deactivate or Delete User Account:

Primary Actor: HR Admin

Stakeholders: User

Preconditions: The HR Admin has to have an account that is active and have the HR_ADMIN_DEACTIVATE_EMP authority.

Minimal Guarantee: Action is logged.

Success Guarantee: The user's account will be successfully activated/deactivated.

Main Success Scenario:

1. HR Admin finds the target user's profile.
2. HR Admin selects 'Deactivate' or 'Activate' from the account options.
3. The employee's account status is updated
4. HR Admin can also select 'Delete' that deletes a user and wipes all their data.

Manage Roles:

Primary Actor: HR Admin

Stakeholders: HR Admin

Preconditions: The HR Admin has to have an account that is active and have the HR_ADMIN_ORG_CONFIG authority.

Minimal Guarantee: Empty state message displayed if no roles exist.

Success Guarantee: The role will be successfully added, updated or deleted.

Main Success Scenario:

1. HR Admin accesses the 'Roles' tab from the 'Organization' page.
2. HR Admin clicks on the '+' to add a new role.
3. HR Admin fills out the role's name, description.
4. HR Admin can select a specific role to view its details.
5. HR Admin can click on edit button to edit the name or description, they can also assign or unassign authorities for the role.
6. HR Admin can click on delete button to delete a role.

Extensions:

1. If role name already exists, prevent creation.

Manage Departments:

Primary Actor: HR Admin

Stakeholders: HR Admin

Preconditions: The HR Admin has to have an account that is active and have the HR_ADMIN_ORG_CONFIG authority.

Minimal Guarantee: Empty state message displayed if no departments exist.

Success Guarantee: The role will be successfully added, updated or deleted.

Main Success Scenario:

1. HR Admin accesses the 'Departments' tab from the 'Organization' page.
2. HR Admin clicks on the '+' to add a new department.
3. HR Admin fills out the department's name, description and its location.
4. HR Admin can select a specific department to view its details.
5. HR Admin can click on edit button to edit the name or description, they can also create or delete job titles for the department.
6. HR Admin can click on delete button to delete a department.

Extensions:

1. If department name already exists, prevent creation.
2. If job title name exists within the department, prevent creation.
3. If admin tries to delete a department or job title but active employees are assigned to it, prevent action.

Manage Review Cycles:

Primary Actor: HR Admin

Stakeholders: HR Admin, Manager

Preconditions: The HR Admin has to have an account that is active and have the HR_ADMIN_ORG_CONFIG authority.

Minimal Guarantee: Empty state message displayed if no cycles exist.

Success Guarantee: The cycle will be successfully added or closed.

Main Success Scenario:

1. HR Admin accesses the 'Performance Reviews' tab from the 'Organization' page.
2. HR Admin clicks on the '+' to add a new Review Cycle.
3. HR Admin fills out the cycle's name, description, start and end date of the period to be reviewed, and the metrics template and managers are notified to review their employees.
4. HR Admin can select a specific cycle to view its details and the analytics that can be filtered by department.
5. HR Admin can click on the close button to close cycle submissions.

Extensions:

1. If cycle name already exists, prevent creation.

Manage Review Templates:

Primary Actor: HR Admin

Stakeholders: HR Admin

Preconditions: The HR Admin has to have an account that is active and have the HR_ADMIN_ORG_CONFIG authority.

Minimal Guarantee: Empty state message displayed if no templates exist.

Success Guarantee: The template will be successfully added or deactivated.

Main Success Scenario:

1. HR Admin accesses the 'Performance Reviews' tab from the 'Organization' page and clicks the 'View Templates' button.
2. HR Admin clicks on the '+' to add a new Review Template.
3. HR Admin fills out the template's name, description and adds its metrics, for each metric name, description and weight are entered.
4. HR Admin can select a specific cycle to view its details and metrics.
5. HR Admin can click on the deactivate button to deactivate the template.

Extensions:

1. If template name already exists, prevent creation.

Manage Benefit Packages:

Primary Actor: HR Admin

Stakeholders: HR Admin

Preconditions: The HR Admin has to have an account that is active and have the HR_ADMIN_BENEFITS authority.

Minimal Guarantee: Empty state message displayed if no benefit packages exist.

Success Guarantee: The benefit package will be successfully added, updated or deactivated.

Main Success Scenario:

1. HR Admin accesses the 'Benefits' page.

2. HR Admin clicks on the '+' to add a new package.
3. HR Admin fills out the package's name, description and policy number.
4. HR Admin can select a specific package to view its details and plans.
5. HR Admin can click on edit button to edit the name or description.
6. HR Admin can click on deactivated button to deactivate a package, and that deactivate all active plans in a package which also ends all employee enrolments of these plans.

Extensions:

1. If package name already exists, prevent creation.

Manage Benefit Plans:

Primary Actor: HR Admin

Stakeholders: HR Admin

Preconditions: The HR Admin has to have an account that is active and have the HR_ADMIN_BENEFITS authority.

Minimal Guarantee: Empty state message displayed if no plans exist.

Success Guarantee: The benefit plan will be successfully added, updated or deactivated.

Main Success Scenario:

1. HR Admin accesses the 'Benefits' page and selects a specific one.
2. HR Admin can click on '+' to add a new benefit plan for the package.
3. HR Admin fills out plan details including name, description, if it is social insured and if it is taxable, type (Allowance, Insurance), if type is allowance, admin can enter the allowance amount, or if it is insurance, admin can enter the employee's cost, employer contribution, if parent, spouse or child is covered and amount for covered dependents and maximum student age coverage.
4. HR Admin can click on edit button to edit the plan's name or description.
5. HR Admin can click on deactivated button to deactivated a plan, which ends all employee enrolments of that plan.

Extensions:

1. If plan name already exists for the package, prevent creation.

Assign Benefits to Employees:

Primary Actor: HR Admin

Stakeholders: Employees

Preconditions: The HR Admin has to have an account that is active and have the HR_ADMIN_BENEFITS authority, Benefit package has to be active.

Minimal Guarantee: Empty state message displayed if no plans exist.

Success Guarantee: The benefit plan will be successfully added, updated or deactivated.

Main Success Scenario:

2. HR Admin accesses the 'Benefits' page and selects a package and then selects a specific plan.
3. HR Admin clicks on assign employees and a list of any employee that is not enrolled is displayed.
4. HR Admin selects the employee(s) of their choice and assigns them.

Extensions:

1. If plan or package aren't active, prevent action.

Edit User Profile:

Primary Actor: HR Admin

Stakeholders: User

Preconditions: The HR Admin has to have an account that is active and have the HR_ADMIN_EDIT_EMP authority.

Minimal Guarantee: HR Admin can access the user's profile.

Success Guarantee: User's profile is successfully edited.

Main Success Scenario:

2. HR Admin accesses the 'Employees' page and selects a specific employee.
3. HR Admin can edit user's information and roles.
4. HR Admin can add or remove face data for the user.
5. HR Admin can add or remove documents for the user.

Extensions:

1. If edited company email, personal email or national ID is duplicated, prevent saving.

Maintain System Rules:

Primary Actor: HR Admin

Stakeholders: HR Admin

Preconditions: The HR Admin has to have an account that is active and have the HR_ADMIN_SYSTEM_SETTINGS authority.

Minimal Guarantee: HR Admin can access the system rules page.

Success Guarantee: New system rules are successfully set.

Main Success Scenario:

1. HR Admin accesses the 'System Rules' page.
2. HR Admin can set shift rules, lateness disciplinary deduction rules, labour rules, leave rules, Social Insurance, Universal Health Insurance, Martyr's funds and training funds and income tax rules. Each one is stored in the database in its own table as a snapshot of all the rules on save.
3. Old rules are deactivated by setting their 'effective to' dates to today and new rules are created with 'effective to' date as null.
4. Global Notifications for all active users are sent.

Extensions:

1. If Lateness Deduction's smallest bracket doesn't start after grace period or if its largest bracket isn't open ended (late to is N/A), prevent save.
2. If Lateness Deduction brackets aren't contiguous, prevent save.
3. If Income Tax largest bracket isn't open ended (Income to is N/A), prevent save.
4. If Income Tax brackets aren't contiguous, prevent save.

Add Holiday:

Primary Actor: HR Admin

Stakeholders: HR Admin

Preconditions: The HR Admin has to have an account that is active and have the HR_ADMIN_SYSTEM_SETTINGS authority.

Minimal Guarantee: HR Admin can access the system rules page.

Success Guarantee: New Holidays are successfully added.

Main Success Scenario:

1. HR Admin accesses the 'System Rules' page.
2. HR Admin can add a new holiday by entering name, start date, end date and whether its paid or not.
3. Global Notifications for all active users are sent.

Extensions:

1. Any Leave Requests, permissions that overlap are refunded or split and the employees are notified.
2. If Holiday Overlaps with weekend, prevent creation.

Maintain Shift Rule:

Primary Actor: HR Admin

Stakeholders: HR Admin

Preconditions: The HR Admin has to have an account that is active and have the HR_ADMIN_SYSTEM_SETTINGS authority.

Minimal Guarantee: HR Admin can access the system rules page.

Success Guarantee: New Shift Rule is successfully configured.

Main Success Scenario:

1. HR Admin accesses the 'System Rules' page.
2. HR Admin sets a new shift rule: Start, Afternoon and end shift times, workdays and grace period.
3. Old shift rule is deactivated by setting its 'effective to' date to today and the new rule is created with 'effective to' date as null.
